

PARACHUTIST DROPBAG RELEASE

Type: KW120A

TECHNICAL DATA

Operating weight range **10 kg - 300 kg** (22 lb - 660 lb)

Device weight **480 g** (17 oz)

Operating temperature **-45°C do +55°C**

Resistant to seawater

Resistant to sand

PRODUCT DESCRIPTION

The parachutist's personal bag disconnecting device is an automatic device used to disconnect the bag from the parachutist when the bag comes into contact with the ground or terrain obstacle.

The device can be mounted both to the harness and to the bag. The device is activated when the bag is lowered by the parachutist on a cable. The 5-second delay countdown then starts. After this time the device is ready to be disconnected.

After the bag touches the ground, the device disconnects and the bag is separated from the parachutist.

The device is intuitive, fully mechanical and does not require maintenance from the user. It is resistant to load rotation.
