

# CARGO PARACHUTE RELEASE

Type: KW1000A

## TECHNICAL DATA

Operating weight range **40 kg-1000 kg** (88 lb – 2200 lb)

Device weight **1200 g** (42 oz)

Operating temperature **-45°C do +55°C**

Resistant to seawater

Resistant to sand

## PRODUCT DESCRIPTION

The automatic device disconnecting the load from the parachute is an automatic device used to disconnect the load from the parachute at the moment of contact of the load with the ground.

The device can be used with all parachutes available on the market, both individually and in multi-canopy systems. The device is activated when the parachute opens. A 5 second delay countdown then starts. After this time the device is ready to be disconnected.

When the load touches the ground, the device disconnects and the parachute is separated from the load.

The device is intuitive, fully mechanical and does not require maintenance from the user.
